

# BIO-BLOCK

**BIO-BLOCK** is a solid, bacterial-based block used for the decomposition of fat, oil and grease in higher flow systems such as lift stations and wet wells. The safe, naturally occurring bacteria are present in high numbers to handle heavy organic loading. This unique block will gradually dissolve over a 30-60 day period allowing for continuous treatment and degradation of waste.

**BIO-BLOCK** also reduces odors and grease buildup.

## PRODUCT SPECIFICATIONS

### PRODUCT DETAILS:

#### Effective Ranges:

pH . . . . . 4.25 - 10

Temperature. . . . 40°F - 130°F

#### Bacterial Count:

CFU per gram . . . . 4 billion

Nutrients . . . . . 7 Strains Bacillus

#### Directions:

Suspend the block into the treatment area, allowing the block to be placed just away from the higher flow areas.

Packaging: 5 lb. blocks; 4 blocks per case

### PRODUCT BENEFITS

- Reduces Hydrogen Sulfide
- Reduces frequency of pumpouts
- Reduces Sludge Build-Up
- Breakdown FOG
- Eliminates need for metering pump
- Allows for continuous treatment of waste
